

Densifier Densifying Compound

Densifying Compound

Crete Rx™ Densifier contains nanoparticle silicate to better penetrate and harden honed concrete surfaces. Treated surfaces will exhibit improved abrasion and wear resistance along with improved chemical resistance. Use Crete Rx Densifier after the honing step in restorative maintenance procedures.

Features

- Nanoparticle silicate chemistry
- Strengthens and hardens polished concrete
- Concrete surface exhibits improved abrasion and chemical resistance

Available In

5 Gal. Pail Item #167105-00

Directions for Use

Use after the Betco Honing Tool to harden and prepare the floor for the Polish step. Apply Densifier at proper application rate with a low-pressure sprayer or flatmop, mop and mocket. Keep the surface wet for 15-20 minutes; re-applying in dry areas if necessary. After initial application time, allow floor to dry. Do not attempt to remove excess material.
