Heavyweight Applicator Bar Only

18" Heavyweight Applicator Bar Only

Our favorite tool for applying water based-finish is the T-bar. This contractor grade applicator "T-bar" is weighted to assure proper film thickness when applying Basic Coatings' sealers and finishes. The head swivels freely to allow for turns. Heavy duty metal construction provides long-lasting durability. Be sure to couple this applicator bar with Basic Coatings' 60" Handle.

Features

Consistent and even coverage

Available In

- Heavyweight Applicator Bar Only Item #911-7400
- Heavyweight Applicator Bar Only Item #911-8500
- Lightweight Applicator Bar Only Item #901-1300

Directions for Use

Pour 4" wide line of finish stretching the length of the floor, going with the grain. Hold applicator at a slight angle and drag the finish in a squeegee of plow-type motion. Be sure to stop at least 3 feet from opposite wall. Overlap 2" of the previous pass, and pull parallel passes until the entire floor is coated. Brush out all turns, stops, and applicator marks in the direction of the puddle line. Feather out turns with a painter's pad after the T-bar has made the turn. Add finish to your puddle line when needed to maintain proper amount accross the room or sport floor.
