

Crete Rx Reset Tool, DRS32BT

Crete Rx Reset Tool

Specialized tool designed to restore, prepare, or reset the surface of polished concrete or cementitious terrazzo floors. It is typically used when the floor's gloss, texture, or overall finish has deteriorated due to heavy traffic, wear, or surface damage. The tool removes imperfections such as stains, scratches, or etching, and it prepares the floor for subsequent polishing steps. Coverage: up to 300,000 sq ft per tool

Features

Abrasive strength 'resets' neglected polished concrete floors which may have excessive finish, film accumulation, or pitting
Prepares polished concrete floors for grinding, honing and polishing

Available In

Crete Rx Reset Tool, Crewman 20" HD & Foreman 20DS Item #E30005-00

Crete Rx Reset Tool, Genesys 20" Item #E30010-00

Crete Rx Reset Tool, DRS32BT Item #E30033-00

Directions for Use

The Crete Rx™ Polishing Tools are highly specialized for polishing concrete floors and must be used correctly to prevent tool, machine, or surface damage. Note: These tools are rotation-sensitive and must match the rotation direction of the floor machine (Clockwise CW

000 or Counter-Clockwise CCW000). Incorrect usage may lead to machine or tool failure.
